ACKNOWLEDGEMENTS

Perhaps one of the more difficult parts of this book is acknowledging all those who have played a part in its coming to fruition. It is tempting here to somehow name all those whom helped in a neat list, ordered by their degree of contribution, or perhaps in a plot or table! But, alas this is not possible, since many contributions are indirect, subtle, subjective and do not necessarily present themselves in a clear manner. In any case, I think it's pertinent to begin by acknowledging my supervisor Prof. Dr. Ramon Carbonell, at the Institute of Earth Sciences 'Jaume Almera' in Barcelona, without whom this thesis would never have commenced. From the beginning contacts in Canada and for so much help with so much paperwork and the long patient waits for documentation, homologation, etcetera, I am truly grateful. Thank you for the opportunities you have given me, such as participating in conferences, workshops and field work. Thanks for many of the ideas for which you then encouraged me to develop independently, and finally for the kind, personal attitude that you always espoused and for the constant support when my ideas were, so-to-speak, turbulent.

At Jaume Almera I acknowledge the friendship and support of too many to list, but particularly, though in no particular order, to Imma, David, 'Ola', Bea, Gusman, Alcinoe and Alba, as well as the long list of others that are too many to mention, but who have touched me positively in some way or just made me feel welcome in Barcelona. To Dennis and Joaquina, for being such great friends and for all the help and advice both scientifically and personally. To the administrative staff at Jaume Almera for being so patient with my broken Catalan and Spanish and for arranging my travel and for just being a friendly face.

To the people at the department of geodynamics and geophysics at UB for being so supportive, but especially to Pilar, Juanjo, Alex, Ester, Eduard, Alex, Ana Carmona and Oriol for always making me feel welcome in the department.

To my colleagues at the Marine Institute (CMIMA) for all the great lunches, and camaraderie, but especially for the many stimulating discussions over 'Nespressos'. Particularly, to Valentí, Berta, Josep Lluís, Josep de la Puente, Rafa, Xavi, Roger and Cesar, in addition to many others simply too lengthy to mention without fear of excluding someone inadvertently. In addition I would like to extend thanks to Francis Machín (formerly of CMIMA) at the University of Las Palmas de Gran Canaria in the Canary Islands and Simon Ruiz at the Mediterranean Institute for Advanced Studies in the Balearic Islands.

To all my colleagues from the GO project outside of Spain, I thank, in the UK, Richard Hobbs and Ekaterina Vsemirnova, John Huthance, Ruben Alvaro and Katy Sheen. In France, Louis Geli, Marc Andre Gutscher, Elise Quentel and Emmanuel Cosquer. In Germany, I acknowledge Dirk Klaeschen, Cord Papenberg and Gerd Krahnmann. In Portugal, I thank Isabel Ambar, Nuno Serra, Luis Matias and Luis Pinheiro. To the crews of the N/O Urania, the RRS Discovery and the B/O Sarmiento de Gamboa I thank you for safe and fruitful surveys.

Thank you to my colleagues in Canada and the US, particularly to Chuck Hurich and Jeremy Hall at Memorial University of Newfoundland in St. John's, Barry Ruddick at Dalhousie University in Halifax, Steve Holbrook at the University of Wyoming and to the Seismic and Electromagnetism Section at the Geological Survey of Canada in Ottawa. To my friends in Ottawa whom continued to believe in me and encourage me and who still remain close friends even after I bid you all a heartfelt adieu.

To the publishers of Continental Shelf Research (Elsevier), Ocean Science (European Geoscience Union) and Geophysical Research Letters (American Geophysical Union) thank you for allowing me to reprint my publications in this doctorate thesis.

To my parents who have always supported me, even from across the Atlantic ocean. You have given me both roots and loving wings and always have instilled in me the importance of a life-long education of the formal and informal kinds. To my maternal grandfather Patrick James Grant, who was forced to quit school at a young age to work

for his family. You were largely self-educated, and inspired me from a young age to keep on reading, advice that will be passed on to my children in time. To my adopted Catalan family, Josep, Maria Elena, Elena, David and Raquel, you have helped in more ways than you might think, but mainly through welcoming me in your country, a country that I now call home.

And, to you Anna... it's difficult to fully express in words your total contribution to this thesis. Perhaps the thesis itself will serve as a starting point. You have always inspired me with your calm determination and gentle mannerisms. You have helped so much in concrete ways, through your tireless edits (yes, even correcting my English), translations, your respectful, but assertive criticisms of the content and style of this thesis, your expert data analysis as well as all the little ways you have helped me, not least of which through the mountains of administrative paperwork. But, there are also the non-quantifiable ways in which you helped me. You always encouraged me and reassured me that everything will come together in the end, even when things seemed so chaotic, without purpose or direction. You taught me that a Ph.D. thesis is more than the original research contained within its pages, it is also the collection of all the little (and big) mistakes that I made along the way, which have hopefully not found their way into these pages but have shaped who I am as a professional scientist. For this, you deserve my deepest gratitude. Yet most importantly, thanks for loving me and marrying me and for bringing our child into this world. Whatever happens in life, you and Marc are (and forever will be) my utmost priority. Finally, to little Marc, my son...you are still so young and innocent with a 'world of wonder' yet to explore. This thesis is dedicated to you because it represents what I feel are some of the fundamentals of 'the good life': a curiosity for exploration, life-long learning and to believing in yourself, even when others may doubt you. Life is for living and my wish for you is to live it well.
