

ACKNOWLEDGEMENTS

The funding to produce this dissertation, as well as the study period for the Doctoral courses in the ETSAB-UPC in Barcelona, were supported by the Venezuelan National Council for Scientific and Technological Research, by Grant N°: 199601500.

Special thanks to my Dissertation Directors: Professors Francisco López Almansa and Lluís Gonzaga Pujades i Beneit, for the invaluable and unconditional support at all times and conditions.

Thanks to the Department of Architecture Structures and to the Department of Geotechnical Engineering and Geosciences in the Polytechnic University of Catalonia, which have given special support to the author in his studies and work.

The author wishes to thank the University of The Andes for this spectacular opportunity of scientific exchange with a foreign University, which has produced, in the author, an important personal and intellectual improvement.

Special thanks to Jordi, Carolina, Humberto and Julia whose support and friendship are invaluable to the author.

Thanks to the people of Barcelona, which make the city a place to remember forever, and to the city, whose spectacular beauty is always a fountain of inspiring thoughts.

To the women of my life:

My Wife, my Daughter, and my Mother

In memory of my Father
